

# Your Microsoft workloads, remixed

## 3 options for your Microsoft licenses on AWS

### BRING LICENSES

**Deploy eligible applications on AWS by bringing your own licenses (BYOL)**

- ✓ Reduce costs by leveraging existing licensing investments
- ✓ Extend software lifecycles without additional hardware costs
- ✓ Expedite cloud migrations by using existing virtual machine images

### GET AWS-PROVIDED LICENSES

**Choose AWS instances that include the cost of licensing**

- ✓ Pay-as-you-go with no upfront costs or long-term commitments
- ✓ Fully control when you are billed
- ✓ Get out of the business of managing licensing compliance

### ELIMINATE LICENSES

**Replace Microsoft-licensed products for ultimate freedom and savings**

- ✓ Modernize on purpose-built cloud and open source technologies
- ✓ Break free from the punitive terms and high cost of Microsoft licensing
- ✓ Lower costs, harden security, and improve price/performance

### Embrace license flexibility

As your business needs change, you can switch license types between BYOL and AWS-provided licensing—without redeploying your existing workloads.
