Guidance for SWIFT Alliance Access on AWS

Alliance Connect Virtual Silver

This architecture diagram shows a standardized environment for connecting to the SWIFT network using Alliance Connect Virtual Silver connectivity.

- 1 This architecture operates across two AZs for redundancy.
- 2 Configure **Amazon VPC** with private subnets that meet AWS and SWIFT CSP security.
- 3 The **EC2** instance hosts SAA for SWIFT message processing.
- 4 The **EC2** instance hosts SAG and SNL for secure financial transmission.
- 5 (Optional) **Amazon RDS** operates in active or standby mode, storing configuration and message data for SAA. Note that while customers can use external databases, SWIFT only supports the embedded database.
- 6 **Systems Manager** provides secure remote access, eliminating the need for a dedicated jump server.
- 7 **CloudWatch** collects, stores, and monitors logs and metrics from the SWIFT environment.
- 8 A dual Alliance Connect Virtual **EC2** instance, based on Juniper vSRX platform, establishes **AWS VPN** connectivity to the SWIFT network.
- 9 An **AWS VPN** gateway links the **Amazon VPC** to **Direct Connect** for reliable, private connectivity.
- 9a An internet gateway allows communication between the **Amazon VPC** to the SWIFT network over the internet, providing redundancy and failover capability.
- 10 **Direct Connect** provides private connectivity between AWS and data centers or colocation environments.

Guidance for SWIFT Alliance Access on AWS

Alliance Connect Virtual Bronze

This architecture diagram shows a standardized environment for connecting to the SWIFT network using Alliance Connect Virtual Bronze connectivity.

- 1 This architecture operates across two AZs for redundancy.
- 2 Configure **Amazon VPC** with private subnets that meet AWS and SWIFT CSP security.
- 3 The **EC2** instance hosts SAA for SWIFT message processing.
- 4 The **EC2** instance hosts SAG and SNL for secure financial transmission.
- 5 (Optional) **Amazon RDS** operates in active or standby mode, storing configuration and message data for SAA. Note that while customers can use external databases, SWIFT only supports the embedded database.
- 6 **Systems Manager** provides secure remote access, eliminating the need for a dedicated jump server.
- 7 **CloudWatch** collects, stores, and monitors logs and metrics from the SWIFT environment.
- 8 A dual Alliance Connect Virtual **EC2** instance, based on Juniper vSRX platform, establishes **AWS VPN** connectivity to the SWIFT network.
- 9 An **AWS VPN** gateway links the **Amazon VPC** to **Direct Connect** for reliable, private connectivity.
- 9a An internet gateway allows communication between the **Amazon VPC** to the SWIFT network over the internet, providing redundancy and failover capability.
- 10 **Direct Connect** provides private connectivity between AWS and data centers or colocation environments.
