

# Guidance for Building Queries in AWS Clean Rooms

Query, analyze, and collaborate with data in AWS Clean Rooms.

- 1 **AWS Glue** is used to produce an **AWS Glue Data Catalog** for data provided in account A.
- 2 **AWS Clean Rooms** is configured to provide data from account A as part of the collaboration.
- 3 **AWS Glue** is used to produce a **Data Catalog** for data provided in account B.
- 4 **AWS Clean Rooms** is configured to provide data from account B to the collaboration.
- 5 Results of a collaboration within **AWS Clean Rooms** are stored in an **Amazon Simple Storage Service (Amazon S3)** bucket within account A.
- 6 **AWS Glue** is used to create a **Data Catalog** of the query results from **AWS Clean Rooms** collaboration. **Amazon Athena** is configured to query results data stored on **Amazon S3**.
- 7 **Amazon QuickSight** is used to design and share dashboards by utilizing the query results developed in **Athena**.
