

Guidance for Establishing an Initial Foundation using Control Tower on AWS

- (CFLZ1-P2)** Create an AWS account using a planned naming convention for root user email and account alias, secure root user account, and configure billing and tax information.
- (CFLZ1-P4)** Create and configure **AWS IAM Identity Center** and standard management account roles for administrative management. Apply security configurations to **IAM Identity Center** settings.
- (CFLZ1-P3)** Activate **AWS Cost Explorer** and create and configure **AWS Cost & Usage Report**.
- (CFLZ1-P5)** Plan and deploy **AWS Control Tower** from identified parameters and secure your log data through **AWS Key Management Service (AWS KMS)** encryption. Apply an additional **AWS Control Tower** setting for landing zone. Set up **AWS CloudTrail** to deploy **CloudTrail** to all AWS member accounts, delivering logs to Log Archive S3 Bucket.
- (CFLZ1-P6)** Build foundational Organizational unit structure on top of your **Control Tower** deployment.
- (CFLZ1-P7)** Establish and deploy AWS Tag Policies. Activate cost allocation tags.
- (CFLZ1-P8)** Deploy additional foundational security hardening configurations to your environment to include **CloudWatch** monitoring and **AWS Config** to management account, apply additional service control policies through AWS Organizations.
